Quality control throughout the entire manufacturing process ensures you get pure, safe, natural products that meet your exacting standards.

Next To Nature, Inc.

To ensure you're getting what you pay for in a natural product, we use scientific identity testing of raw materials. Next To Nature brand supplements have the benefit of testing at multiple stages during production.

We test in order to meet US Food and Drug Administration (FDA) requirements for dietary supplement manufacturing. You want natural products that you feel good about.

- ◆ You want to know they're contaminant-free.
- ◆ And you want to be sure they contain the specific ingredients we have listed on the label.

Here's what we test, and why...

We test raw materials

We make sure that the raw materials that come through our facilities' doors meet GMP standards.

- ◆ We test to make sure there are no mold, bacteria or other biological contaminants.
- ◆ We test to ensure the raw materials we get are what the supplier says they are and match the ingredients we use in our formulations.
- ◆ We test to make sure our raw materials do not contain harmful levels of heavy metals.
- ◆ We test to make sure our raw materials are not adulterated.

And we don't stop with the testing at pre-production.

We test the final products

And finally, when each supplement batch is mixed and completed, a final round of testing ensures the finished product is contaminant-free at the end of the production line.
